MA VIE SYSTEMS

Your machine, one technical scope.

Project-based engineering support for machine builders and industrial plants.

THREE CORE CAPABILITIES

Machine manufacturing

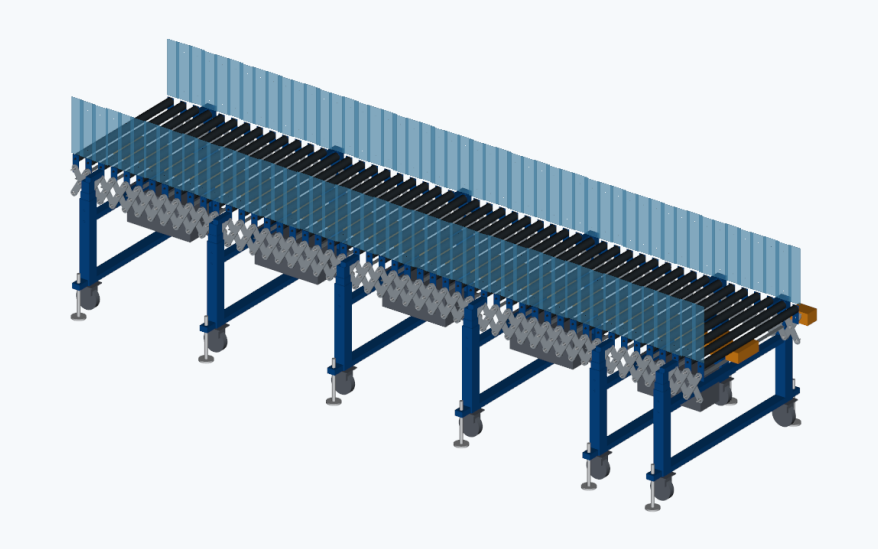

Custom mechanical design, prototyping and manufacturing.

Electrical panels

Electrical design, panel manufacturing and commissioning.

Industrial automation

PLC/HMI, drives, sensors and field integration.

AK70 / 3D CAD CONCEPT

Working-principle illustration. Not an installed customer machine or load test.

A work package aligned with your OEM team

For one machine or unit, define the panel, control software, integration and commissioning scope together.

Deliverables within the agreed scope

- Electrical drawings and panel documents
- PLC/HMI project files and backups
- Interface, alarm and functional descriptions
- Test records and operating documentation

Four details to get started

01 Which machine/model and function?

02 Which panel, control or integration scope?

03 Which existing platform and documents?

04 Where, when and who accepts the work?

Mechanical/process and electrical/software responsibilities, tests and acceptance criteria are defined separately for each project.

Let us define your project together.
